**The English Version of Special Issues of
The 70th Anniversary of the Iron and Steel Institute of Japan**

The Iron and Steel Institute of Japan is pleased to offer the 70th anniversary special issue which presents the most comprehensive survey on progress of the iron and steel technologies in Japan in the past decade, compiled to date through the efforts of authors well versed in the current technologies.

The special issue has been published as the March 1985 issue of "Tetsu-to-Hagane". The edition in English is soon to be published in the July and the August 1985 issue of the Transactions of the Iron and Steel Institute of Japan. The special issues cover all aspects of technological developments in Japanese iron and steel industry from ore preparation to evaluations of products and from basic research to plant engineering. The July issue contains the first three chapters: World situations surrounding Japanese iron and steel industry and their impacts on technology, Ironmaking, and Steelmaking; the opening chapter is devoted specifically to the Japanese way of overcoming the oil crisis. The August issue will deal with the last two chapters: Shaping & fabrication/Instrumentation & control and Products, traditional and new.
