

Special Issue on Recent Advances in Solidification

- Preface to the special issue "Recent Advances in Solidification" K.Miyazawa et al.
- Fundamentals of solidification**
- Metastable phase diagrams and rapid solidification processing(Review) P.Gilgien et al.
- Application of disorder trapping theory to the solidification of Ni₃Al H.Assadi et al.
- Undercooling and nucleation during solidification(Review) J.H.Perepezko et al.
- Solidification characteristics of undercooled Ni and Ni-Co binary alloys A.Abedi et al.
- Dendritic growth in undercooled melt with forced convection:experiment for pure succinonitrile Y.Miyata et al.
- Dendritic growth in undercooled melt with forced convection:theory Y.Miyata
- Dendritic growth of succinonitrile in terrestrial and microgravity conditions as a test of theory M.E.Glicksman et al.
- Effect of external heat extraction on dendritic growth into undercooled melts T.Koseki et al.
- Directional solidification of near-azeotropic CuMn-alloys:a model system for the investigation of morphology and segregation phenomena A.Schievenbusch et al.
- Simulation of peritectic reaction during cooling of iron-carbon alloy K.Matsuura et al.
- Analysis of solidification path of Fe-Cr-Ni ternary alloys K.Osasa et al.
- Transport phenomena and solidification**
- Methodologies for modeling of solidification microstructure and their capabilities(Review) D.M.Stefanescu
- Stochastic modelling of solidification grain structures Ch.-A.Gandin et al.
- Modelling the development of microsegregation during solidification of an Al-Cu-Mg-Si alloy J.Lacaze et al.
- Simulation of micro-/macrosegregation during the solidification of a low-alloy steel C.Beckermann et al.
- Control of centerline segregation in continuously cast bloom by continuous forging process S.Nabeshima et al.
- Low superheat teeming with electromagnetic stirring K.Ayata et al.
- Influence of alloying elements on the segregation of high purity CrMoV steel H.Yamada et al.
- Redistribution of particles during solidification Q.Han et al.
- A coupled force field-thermal field analytical model for the evaluation of the critical velocity for particle engulfment D.M.Stefanescu et al.
- Effect of cooling rate on compositions of oxides precipitated during solidification of steels H.Goto et al.
- Experimental study and modeling of the precipitation of non metallic inclusions during solidification of steel M.Wintz et al.
- Deformation behavior during solidification of steels T.Nakagawa et al.
- Free deformation of initial solid shell of Fe-C alloys S.X.Dong et al.
- Issues in thermal-mechanical modeling of casting process B.G.Thomas
- Novel solidification**
- Solidification processing of YBCO superconductive oxide(Review) K.Ohtsu et al.
- Prediction versus experimental fact in the formation of rapidly solidified microstructure(Review) H.Jones
- Formation of hybrid clad layers by laser processing A.Hirose et al.
- Rapid solidification of steel droplets in the plasma-rotating-electrode-process T.El.Gammal et al.
- Formation of solidification structure in twin roll casting process of 18Cr-8Ni stainless steel T.Mizoguchi et al.
- Thin strip casting of Ni base alloys by twin roll process M.Yukumoto et al.
- Surface quality of type 304 stainless steel cast by twin-roll type strip caster H.Yasunaka et al.
- A new process to manufacture semi-solid alloys M.Kiuchi et al.
- Influence of prior solidification conditions on the structure and rheological behaviour of partially remelted Al-Si alloys L.Salvo et al.
- Mushy state behavior:rheological characterization and influence on air gap formation P.Vicente-Hernandez et al.
- The development of a continuous rheocaster for ferrous and high melting point alloys K.E.Blazek et al.
