

Contents

Fundamentals of High Temperature Processes

- Development of Numerical Model for Estimation of Grinding Rate of Particles under the Fluidization
H. TAKAHASHI, K. CHIKAMORI, T. YAMAMOTO, H. AOKI and T. MIURA627
- Deoxidation of Molten Iron with Magnesium Vapour Produced *In-situ* by Carbothermic Reduction of
Magnesia/*J. SHAN, K. OKUMURA, M. KUWABARA and M. SANO*635
- Dephosphorization Rate of High Carbon Iron Melts by CaO-based Slags
T. SATO, K. NAKASHIMA and K. MORI643

Forming Processing and Thermomechanical Treatment

- Development of Method of Pipe Expansion with Drawing for Improving the Fatigue Property under
Internal Pressure/*D. SUMIMOTO and H. ICHIHARA*650

Mechanical Properties

- Estimation of Flow Stress by the Kocks–Mecking Model at Strain Rate of $10^3/s$ for an Ultra Low Carbon
Steel/*J.-H. PARK, Y. TOMOTA, S. TAKAGI, S. ISHIKAWA and T. SHIMIZU*657
- Development of a Cobalt Free Wear Resistant Stainless Steel (Technical Report)
Y. SAITO and S. SABURI673

Social and Environmental Engineering

- Role of "Kobune" in Underground Construction of Tatara Furnace
K. NAGATA, A. HANIU and T. SUZUKI665
