

Contents

Fundamentals of High Temperature Processes

- Effects of Pressure and Inert Gas Top Blowing on the Rate of Molten Steel Hydrogen Desorption
S. MUKAWA and Y. MIZUKAMI243

Ironmaking

- Flow Characteristics of Liquid and Fine Particles in the Lower Part of Blast Furnace
R. MURAI, A. MURAO, K. GOTO, M. SATO and T. ARIYAMA249

Steelmaking

- Behaviour of Nozzle Clogging in Deoxidation of Molten Iron with Injecting Magnesium Vapour
J. SHAN, K. OKUMURA, M. KUWABARA and M. SANO256

Casting and Solidification

- Current Researches on the Formation of Solidification Microstructure in Alloys (Review)
M. KUDOH229
- Suppression of Mold Powder Entrapment Using Immersion Nozzle of Elliptic Cross Section
J. YOSHIDA, M. IGUCHI and S. YOKOYA264

Chemical and Physical Analysis

- Simultaneous Determination of Arsenic and Antimony in Steels and Pure Coppers by High Power
Nitrogen Microwave Induced Plasma Atomic Emission Spectrometry Coupled with Hydride
Generation Technique/A. MATSUMOTO, H. TAKEUCHI and T. NAKAHARA270

Surface Treatment and Corrosion

- Morphology Control of Zinc Deposits of Electroplated Steel Sheets (Review)
H. NAKANO and H. FUKUSHIMA236

Transformations and Microstructures

- Effect of S Segregation and BN Precipitation to Creep Cavities on Creep Rupture Properties
J. KYONO and N. SHINYA277
